

## Site Builder Pack--Apptix SharePoint Web Parts

*Share information within your organization or with partners and customers using SharePoint*

Extend SharePoint beyond its "out of the box" capabilities with Apptix's SharePoint Web Parts Packages. The Site Creation Package allows customers to create more efficient sites quickly. The Web Parts included in the package provide customers with a simple method to customize a SharePoint site. Transform your site into a professionally designed, interactive user experience by using the most common and useful SharePoint add-ons included in the Site Builder Pack.

### Apptix SharePoint Web Parts-Site Builder Pack Features Overview

<p><b>Site Creation Plus</b></p>	<p>Site Creation Plus Web Part simplifies the creation of a site for an end user by asking for only the Title, Description, and Site Permissions for the new site. The Web Part allows SharePoint system administrators to delegate the creation of sites while maintaining a certain level of control over the naming conventions and site template used.</p> <ul style="list-style-type: none"> <li>• Allows system administrator to select a Site Template to be used for the new site. All sites created through an instance of the Web Part create the same type of site.</li> <li>• Selecting a Links list where information about the new list is added automatically.</li> <li>• The end user's job is simplified by minimizing the information/choices that must be made during site creation.</li> </ul>
<p><b>Tree View</b></p>	<p>Today, SharePoint does not provide a tree view or hierarchical structure of list or library items. Many users prefer to use a tree view to navigate through their folders and files similar to Windows Explore. The Bamboo Tree View Web Part provides a tree view, hierarchical navigation allowing users to quickly browse through the SharePoint lists and document libraries to locate an item.</p> <ul style="list-style-type: none"> <li>• Select a SharePoint List, Document Library, Picture Library, Discussion Board to display list items and folder structure in a tree view.</li> <li>• Navigate all sites in the site collection or just the sites under the current site.</li> <li>• Fully functioning List, Library and Discussion Board toolbar menus available.</li> <li>• Automatically sort Discussion Board posts by Name or Last Modified Date</li> </ul>
<p><b>Data Viewer</b></p>	<p>The Bamboo Data-Viewer Web Part allows you to display list, SQL table/view, List Rollup, or other external data within a Web Part without using SharePoint Designer. You can customize the look and feel, allow users to group, filter, sort, or export items to Microsoft Excel.</p> <ul style="list-style-type: none"> <li>• Show child list, SQL, or List Rollup data along with master data (linked through fields you select in the master and child data sources).</li> <li>• Perform a calculation (sum, average, count, min or max) on selected columns in the parent and child data sets.</li> <li>• Exporting data to Microsoft Excel exports parent and child data into separate sheets.</li> <li>• Users can drag and drop column headings on the grouping bar in the Web Part to dynamically group the data.</li> <li>• Allow users to perform inline, multi-level filtering of the data on the entire data set instead of just each page in the list.</li> </ul>

# Apptix SharePoint Web Parts-Site Builder Pack Features Overview

<b>List Advanced Search</b>	<p>The List Advanced Search Web Part provides you with the flexibility to easily create an advanced search interface to allow end users to perform a complex query on a large list such as Issues or Tasks using all available fields.</p> <ul style="list-style-type: none"> <li>• Select the list or list rollup data view to search. Choose the fields to provide as search criteria.</li> <li>• Combine the criteria fields using AND and OR operators.</li> <li>• Allow criteria to be grouped to control the order of the search operation.</li> </ul>
<b>SharePoint Navigator</b>	<p>The SharePoint Navigators allows you to create menus, tabs, or tree structures on any page in a site and link to any SharePoint list, library, discussion board, etc. The Site Actions Menu feature allows you to create a menu item with submenus in the Site Actions drop-down-enabling Administrators to quickly link to commonly used resources.</p> <ul style="list-style-type: none"> <li>• Automatically created for you when the Web Part feature is activated in the Site Collection Features area. Use this list, or create your own, to define your navigation structure.</li> <li>• Select from a variety of skins to display your customized menu, tab strip or tree view.</li> <li>• SharePoint security remains in effect ensuring that users who do not have access to pages, lists or sites in your menu, tab or tree view structure won't be able to see those menu items</li> </ul>
<b>World Clock and Weather</b>	<p>The Bamboo Solutions' World Clock &amp; Weather Web Part allows users to display local time and weather for selected major cities around the globe. Many of the weather and clock display settings are configurable.</p> <ul style="list-style-type: none"> <li>• Show weather or clock by location with temperature, date, and time.. Show temperature in Celsius or Fahrenheit.</li> <li>• Show the date and time, weather and location for each of your offices</li> <li>• Choose from analog or digital clock styles as well as colors.</li> </ul>
<b>Calendar Plus</b>	<p>The Calendar Plus Web Part surpasses the existing SharePoint calendar view's functionality by allowing users to specify the list or view, which column to display, the column by which to color code the displayed items, view day, work week, week, month, year, quarter, and Gantt view, and specify holidays by color coding for display.</p> <ul style="list-style-type: none"> <li>• Select a SharePoint List, SQL Table, or a List Rollup DataView Web Part as the data source for your calendar.</li> <li>• View calendar items by year, as well as day, week, work week, quarter, task, Gantt and month view</li> <li>• Color code calendar items by selecting a column to code by, and a color or Hex Code for each value from the tool pane and show or hide the color legend.</li> </ul>
<b>Map Chart</b>	<p>Allows you to display data from a SharePoint List view in a United States, Europe or World map along with color coding. View the data values for each location on the map through pop-up tool tips by mousing over the location.</p> <ul style="list-style-type: none"> <li>• Color-code a US, Europe or World map based on locations and values from columns in a SharePoint List view.</li> <li>• Show the sum, count or average of the values provided by the specified SharePoint List column.</li> <li>• Assign color-coding based on user-defined data ranges that can be labeled for display in a map legend.</li> </ul>
<b>SharePoint Poll</b>	<p>Allows you to quickly create polls, view the poll voting responses, export the responses to Microsoft Excel and display the poll voting responses in a bar graph or pie chart anywhere within a site collection. Allow anonymous user voting, multiple answer selection, and automatically redirect voters to another site or page after voting.</p> <ul style="list-style-type: none"> <li>• Create and edit poll questions and answers for end users. View poll voting responses &amp; export them to Excel.</li> <li>• Indicate whether anonymous users can vote as well as allow users to select more than one response to a poll.</li> <li>• Automatically display current poll results to the user immediately after they submit their vote</li> <li>• Display poll results in a bar graph or pie chart along with the number of votes, percentage of votes or both.</li> </ul>
